REMOTE ETHERNET DEVICE 1 (RED-1)

RED-1 Remote Ethernet Device is a remote control for Audia® and Nexia® systems. It offers a simple, intuitive interface for end users and can be installed and configured to fit the unique needs of a particular application. The device connects via standard Ethernet cabling and is powered over Ethernet, eliminating the need for custom cabling and local power sources. Multiple remote control panels can be connected over large distances using standard network technology.

Features

- Adjustment and/or initiation of up to 32 selectable system volumes and actions
- Volumes are any individual or grouped system levels, including inputs, outputs, matrix cross-points, etc.
- Actions are any individual or grouped system operations, including presets, source selection, mutes, ducking, combining, etc.
- Control functions are programmed in the Audia and Nexia system design software
- High contrast OLED (Organic Light-Emitting Diode) display with a wide viewing angle
- The display brightness can be adjusted to fit the ambient light present in the application and can automatically dim when not in use
- Capacitive touch technology eliminates protruding and moving parts to increase product reliability and longevity while simplifying cleaning
- RED-1 surface mounts or flush mounts to most walls with a wide variety of mounting holes to accommodate standard US and international back boxes. RED-1F flush-mounts to any wall; mounts using the retrofit plate (included) or installs in a Raco® 254 box for North American installation (not included).
- 330' (100m) Ethernet cable length can be extended with standard PoE network technology (routers, switches, hubs, media converters)
- Connects with standard RJ45 or insulation displacement connector (IDC)
- Covered by Biamp Systems' five-year warranty

RED-1F

RED-1

RED-1 FRONT PANEL

Setup and Use

The Audia and Nexia software provides an intuitive interface for setup and programming of the RED-1. The information supplied by this manual relates to physical connections and device setup. For more details on software setup, please consult the Audia or Nexia Help File.

Display

A graphic OLED (Organic Light-Emitting Diode) display with white characters on a black background shows a list of all control items available from that panel, as well as the last selected item. If a control item includes a volume control assignment, the bottom of the display will show a graphical representation of a volume bar with the current level indicated to the right (percentage of maximum level).

Capacitive-touch Scroll Wheel

The capacitive-touch sensor provides a sleek interface for menu navigation and selection. The glossy-finish finger groove allows for scrolling through and selecting available control items, as well as adjusting volume.

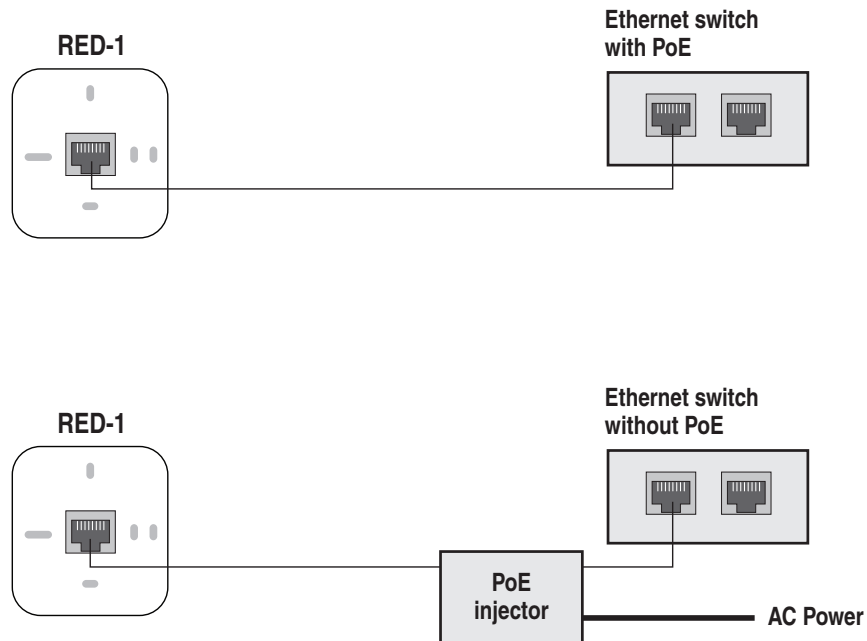

RED-1 BACK PANEL

Connectors

Two Ethernet connectors—one rear-facing RJ45 and one top-facing insulation displacement connector (IDC)—are provided for connecting to the network. Only one connector may be used. The RJ45 and IDC utilize unshielded twisted pair (UTP) wiring to connect to an Audia or Nexia system. This connection is made to the Ethernet port of an Audia or Nexia unit, either directly (single station) or via a network switch, and carries control data over Ethernet.

The RED-1 is powered using IEEE 802.3-2008 Power over Ethernet protocol as Class 1 devices. Either a PoE-capable network switch or a PoE injector is required to power the device; there are no other provisions for power inlet.

RED-1 SET UP

Device Setup Mode

The RED-1 can be configured without connecting to a functional Audia or Nexia network. To enter setup mode, connect the RED-1 to a PoE source and place the jumper or any metal object across the locksmith pins. When configuration is complete, remove the jumper and attach it to only one pin to resume normal operation. Please note: many of the configuration settings can be accessed via the Audia or Nexia software.

Locksmith: Bridge jumper pins to enter setup mode

The cursor has two modes: select and modify. In select mode, the cursor appears as a gray box. When scrolling through the available items in the list, the gray box will highlight the current selection.

"Select" mode in device setup menu

On fields that can be modified, use the Select button to transition to and from modify mode. In modify mode, the cursor appears as an outline box. Use the scroll wheel to adjust the setting up or down.

"Modify" mode in device setup menu

Some screens have additional buttons that are used to accept (OK), reset, or cancel changed settings. Use the scroll wheel to navigate the cursor to these buttons and press the Select button. The OK button saves the setting and exits the screen. The Reset button clears the setting and does not save it. The Cancel button exits the screen without saving the setting.

RED-1 SET UP

Edit Device ID

To name the unit, scroll to the ID Tag icon and press the Select button. Use the scroll wheel and Select button to choose the desired characters. The Device ID must match that of a corresponding block in the Audia or Nexia design. More than one unit may be identified with the same design block (same ID). Device IDs may also be assigned via Device Maintenance in the Audia or Nexia software.

Edit Network Configuration

To edit the network configuration, scroll to the Network icon and press the Select button. The default setting (Static) initializes the IP address to 192.168.1.201, network mask to 255.255.255.0, and gateway to 0.0.0.0. These default settings allow RED-1 to be discovered by an Audia or Nexia device that also has default settings. Network settings may also be assigned via Device Maintenance in the Audia or Nexia software.

Edit Lock Code

To set password protection, scroll to the Key icon and press the Select button. Use the scroll wheel and Select button to choose the desired characters. During normal operation, holding down the Select button for two seconds will lock the unit, and the user will be prompted for the Lock Code before obtaining access. Lock Codes may also be assigned via Device Maintenance in the Audia or Nexia software.

Edit Display Brightness

To change the brightness of the OLED panel, scroll to the Display Brightness icon and press the Select button. Use the scroll wheel and Select button to make adjustments. The first setting represents the normal operational display brightness, and the second setting represents the dim display brightness. Display brightness cannot be assigned via Device Maintenance in the Audia or Nexia software.

Edit Timeouts

To change the lock, dim, and sleep timeouts, scroll to the Timeout icon and press the Select button. Use the scroll wheel and Select button to make changes. For lock and dim, the timeout can be none or range from 5 seconds to 30 minutes; for sleep, the timeout cannot be none. Timeouts may also be assigned via Device Maintenance in the Audia or Nexia software.

View Device Information

To view information about the unit, scroll to the Information icon and press the Select button. The Serial Number, MAC Address, Firmware Version, and System ID are displayed. This is read-only information. The Serial Number is helpful in identifying physical units/ locations when naming them via Device Maintenance in the Audia or Nexia software. Press the Select button again to exit this screen.

Exit

To exit the setup screen, scroll to the Exit Door icon and press the Select button.

RED-1 INSTALLATION

Surface Mount Installation

The RED-1 surface mounts to most walls and has a wide variety of mounting holes that accommodate standard US and International back boxes.

USA, Japan, Australia

EUR
including Germany, Sweden,
UK, Netherland

Italy

Use a screw driver or other suitable tool to engage the latch at the bottom of the RED-1 to detach the back enclosure. When installing the RED-1 using the RJ45 connector, guide the Ethernet cable through the rear opening before attaching the RED-1 to the wall. Connect the RJ45 and snap the front enclosure into the retention holes. When installing the RED-1 using the IDC, use a drill bit to create a hole in the top, side, or rear of the back enclosure along the indentations. Remove the Ethernet cable jacket and shielding.

RED-1 INSTALLATION

Flush Mount Installation

The RED-1F may be flush mounted using the retro-fit plate (provided with the product) or a Racco™ 254 box (purchased from an electrical distributor). To install the RED-1F, a hole must be cut in the wall to accommodate the Racco™ 254 back-box or to use the retro-fit plate. See the figures below.

Wall cut out dimensions

Mounting using a Racco™ 254 back box

Mounting using the retro-fit plate

RED-1 INSTALLATION

Exploded view showing pieces required for mounting to the retro-fit plate
or the Raco™ 254 back-box

When installing the RED-1F using the retro-fit plate or the back-box, fasten the trim ring using the four screws provided to either the retro-fit plate or the back-box. Once the trim ring has been fastened to the retro-fit plate or the back-box, guide the RED-1F front plate at an angle into the top of the trim ring to seat the tabs on the top of the front plate. Once this has been done rotate the bottom of the front plate towards the bottom of the trim ring until it is seated in the trim ring via the bottom clip.

If the front plate needs to be removed use a screw driver or other suitable tool to engage the latch at the bottom of the RED-1F to detach from the trim ring.

Refer to page 12 for instructions regarding the use of the insulation displacement connector.

RED-1 INSTALLATION

Connect the wire according to the color code silkscreened as text next to the IDC or as shown on the label on the back enclosure (see figure below). The color code uses the T568A standard for wiring. When using the T568B wiring scheme, please note that the orange wire pair (OR and WH/OR) and green wire pair (GR and WH/GR) need to be swapped. After inserting the wires, press the tabs until the insulation is punctured with an audible click. No wire stripping is necessary.

Insulation Displacement Connector (IDC)

IDC Silkscreen	GR	WH/BL	OR	BR
	WH/GR	BL	WH/OR	WH/BR

RED-1 SPECIFICATIONS

SPECIFICATIONS (RED-1)

Dimensions (Length x Width x Depth):	5.1 inches x 4.7 inches x 1.25 inches (130mm x 120mm x 32mm)
Weight:	0.5 lb
Power consumption:	PoE Class 1 (3.2W max)
Material:	PC/ABS
Control cable requirements:	Unshielded twisted pair (UTP) wiring, 100BaseT interface using either RJ45 or Insulation Displacement Connector (IDC)
Control cable length:	330 ft. (100m) Ethernet cable length can be extended with standard PoE network technology
Devices per system: Remote Ethernet Devices (including NPS-1) per system:	128
Remote Ethernet Devices per Audia or Nexia unit:	24
Control wiring topology:	Standard Ethernet network wiring
Control programming:	Each control configured for specific operation by the system design software
Compliance:	EU Directive 2002/95/EC, RoHS Directive CE marked FCC

SPECIFICATIONS (RED-1F)

Dimensions	6.22"H x 5.82"W x 0.5"D (158mm x 148mm x 12.7mm)
Power consumption	PoE Class 1 (3.2W @ full display utilization)
Control cable requirements	CAT-5/6/7 Ethernet cable using either RJ-45 or IDC connector
Control cable length	330' (100m) Ethernet cable length can be extended with standard PoE network technology
Control wiring topology	Standard Ethernet network wiring
Control programming	Each control configured for specific operation by the system design software
Compliance	EU RoHS Directive 2002/95/EC; CE; FCC

RED-1 WARRANTY

BIAMP SYSTEMS IS PLEASED TO EXTEND THE FOLLOWING 5-YEAR LIMITED WARRANTY TO THE ORIGINAL PURCHASER OF THE PROFESSIONAL SOUND EQUIPMENT DESCRIBED IN THIS MANUAL

1. BIAMP Systems warrants to the original purchaser of new products that the product will be free from defects in material and workmanship for a period of 5 YEARS from the date of purchase from an authorized BIAMP Systems dealer, subject to the terms and conditions set forth below.
2. If you notify BIAMP during the warranty period that a BIAMP Systems product fails to comply with the warranty, BIAMP Systems will repair or replace, at BIAMP Systems' option, the nonconforming product. As a condition to receiving the benefits of this warranty, you must provide BIAMP Systems with documentation that establishes that you were the original purchaser of the products. Such evidence may consist of your sales receipt from an authorized BIAMP Systems dealer. Transportation and insurance charges to and from the BIAMP Systems factory for warranty service shall be your responsibility.
3. This warranty will be VOID if the serial number has been removed or defaced; or if the product has been altered, subjected to damage, abuse or rental usage, repaired by any person not authorized by BIAMP Systems to make repairs; or installed in any manner that does not comply with BIAMP Systems' recommendations.
4. Electro-mechanical fans, electrolytic capacitors, gooseneck microphones, cords connecting handheld microphones, hard-drives, displays, and normal wear and tear of items such as paint, knobs, handles, keypads and covers are not covered under this warranty. All server-based devices are warranted for 3 years only.
5. This warranty is in lieu of all other warranties, expressed or implied. BIAMP Systems disclaims all other warranties, expressed or implied, including, but not limited to, implied warranties of merchantability and fitness for a particular purpose.
6. The remedies set forth herein shall be the purchaser's sole and exclusive remedies with respect to any defective product.
7. No agent, employee, distributor or dealer of BIAMP Systems is authorized to modify this warranty or to make additional warranties on behalf of BIAMP Systems. Statements, representations or warranties made by any dealer do not constitute warranties by BIAMP Systems. BIAMP Systems shall not be responsible or liable for any statement, representation or warranty made by any dealer or other person.
8. No action for breach of this warranty may be commenced more than one year after the expiration of this warranty.
9. BIAMP Systems shall not be liable for special, indirect, incidental, or consequential damages, including lost profits or loss of use arising out of the purchase, sale, or use of the products, even if BIAMP Systems was advised of the possibility of such damages.

EC Declaration of Conformity

Biamp Systems Corporation, as manufacturer having sole responsibility, hereby declares that the following described product complies with the applicable provisions of the DIRECTIVES below except as noted herein. Any alterations to the product not agreed upon and directed by Biamp Systems Corporation will invalidate this declaration.

Product Models: RED-1, RED-1F

Product Description: Control Accessories for use with audio DSPs.

Applicable EC Directives: Applicable Harmonized Standards:

LVD Directive (2006/95/EC) Safety EN 60065:2002

EMC Directive (2004/108/EC) Emissions EN 55103-1:1996, Environment E2
Immunity EN 55103-2:1996

Special Considerations for Product Environment or Compliance:

Shielded cabling must be used for system connections.

Use only CE marked Power over Ethernet (PoE) device.
